

Your AI SRE Teammate

In today's digital enterprise, production complexity has outpaced operational understanding. Services, dependencies, and change accumulate faster than teams can manage. Traditional approaches — manual dashboards, stale runbooks, tribal knowledge — don't scale. As AI-accelerated development widens the gap between shipping velocity and operational capacity, mean time to resolution stays stubbornly high and on-call teams bear the cost.

20x

Faster Resolution

Incident resolution speed in large enterprise production environments.

10x

Productivity Gains

Operations team productivity improvement, eliminating toil.

5x+

Return on Investment

Reduced downtime and more capacity to meet your service level objectives.

Cirroos is an AI SRE Teammate — combining large-scale AI analytical power with human contextual judgment. Its multi-agentic AI system detects anomalies before they become incidents, investigates alerts accurately, and remediates issues across hybrid and multi-domain environments, always keeping humans in the loop. Built as an extensible platform, Cirroos supports **50+ enterprise-grade integrations** allowing it to connect to data sources as diverse as CI/CD, cloud, collaboration, identity providers, incident response, infrastructure, observability, and ticketing. Native MCP and A2A support connects Cirroos to your broader agentic AI ecosystem.

Strategic Advantage

Cirroos enables enterprises to scale reliability without proportional increases in headcount or cost — turning operational discipline into a competitive advantage.

A Pathway to Autonomous Reliability

Signal Intelligence™

Extracts meaningful signal from alert storms and alert silence with zero rules, built-in FinOps and governance controls.

Reasoning Core

Dynamic planning with patent-pending Ciroos Behavior Patterns™ and extensibility for high-fidelity investigations in complex environments.

Actuator

Closes the loop with structured root cause analysis, contributing factors, detailed evidence, and recommendations for remediation.

Knowledge Graph

Maintains a real-time state of the environment including topology, system context, dependency graph, causal relationships, and persistent memory for precise, correlated analysis.

Automate

Eliminate toil and free teams from routine operational burden.

Augment

AI works alongside human operators during active investigations, accelerating resolution.

Autopilot

Operations run autonomously at scale — reliability without proportional headcount growth.

About Ciroos

Founded in February 2025 by **Ronak Desai, Amit Patel, and Ananda Rajagopal** — leaders with proven records scaling businesses from zero to over \$5 billion. Alumni of Cisco, AWS, and Gigamon, the founding team holds **87 patents** spanning AI, observability, distributed systems, cloud, cybersecurity, and networking. Ciroos is headquartered in Pleasanton, CA, with staff in Europe and India.
